Art Unit: 2877

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bender et al. (US 6,181,426).

Bender et al teaches an apparatus and method for measuring decay in light intensity by electromagnetic radiation passing through a radiation-absorbing sample by absorption of radiation by the sample by deriving a value of the decay from measurements of intensity produced as a number on different positions along a predetermined path, with the light reflecting back and forth between reflectors spaced apart from each other. In column 5, lines 49-62 in particular, there is a discussion of having the detectors detect the light simultaneously. This requires an arrangement in which some of the light passes to each detector and some is reflected to on to the next detector; such an arrangement will be a "partially reflective means" in that it will reflect part, but not all, of the light at the position of each detector (except possibly the last).

Bender et al at least suggests deriving the decay value from all of the detected values (see the discussion relative to figure 2, column 4, line 37 through

Art Unit: 2877

column 5, line 4). Those in the art could choose appropriate light sources, filters, pathlengths, etc. as appropriate for the application at hand.

Papers related to this application may be submitted to Group 2800 by facsimile transmission. The faxing of such papers must conform to the notice published in the Official Gazette, 1096 OG 30 (15 November 1989). The fax number is (703) 872-9306

Any inquiry concerning this communication or earlier communications from the examiner should be directed to R. A. Rosenberger whose telephone number is (703) 308-4804.

Any inquiry of a general nature or relating to the status of this application should be directed to the Group receptionist whose telephone number is (703) 308-0956
